The libexif C EXIF library

- is a library written in pure portable C.
- reads and writes EXIF metainformation from and to image files.
- is licensed under the GNU LESSER GENERAL PUBLIC LICENSE Version 2.1 (LGPL).
- runs under POSIX systems (e.g. GNU/Linux, xBSD, MacOS X, Windows, etc.).

Digital cameras store a surprising amount of information inside each picture they take, in a normally invisible format known as EXIF. Everything from photo basics like the camera shutter speed and aperture to the GPS location and even the name of the camera owner can be hidden inside each photograph. libexif is a library that lets you access that data from within a computer program. Some simple applications called **exif** and **gexif** are also supplied alongside libexif that use libexif to view EXIF data from the command-line or GUI.

Documentation

See the documentation index page.

Download

Source

Download the source code archive by choosing the Github repository link for the subproject you want (in the *About* section below) and navigate to its *releases* page (here's a shortcut for libexif). Old releases are available from the historical archive.

Binaries

The libexif project supplies *only source code packages*. Helpful people around the world compile the source code and provide binaries for a number of platforms. Here is a list of some of the sites you can look. Please report any problems with these binaries to their respective maintainers and not to libexif project members, as we have nothing to do with them.

- AIX: Michael Perzl,
- DragonFly BSD: DragonFly project
- FreeBSD: FreeBSD ports
- Haiku: Haiku ports
- Linux: Chances are, exif and libexif are already supplied by your distribution provider. Use your distribution's package install tool to find and install it.
- Mac OS X: Fink
- Minix: Minix3
- Solaris: Open CSW, Unix Packages ($)
- Windows: Cygwin,

- 2010-12-15: libexif and exif 0.6.20 stability/bugfix release. Release notes
- 2009-11-12: libexif and exif 0.6.19 security/performance release fixes CVE-2009-3895. Release notes Security advisory
- 2009-10-09: libexif and exif 0.6.18 stability/bugfix release. Release notes
- 2008-11-08: libexif and exif 0.6.17 security/bugfix release fixes CVE-2007-6351 and CVE-2007-6352 as well as many other bug fixes and enhancements. Release notes
- 2007-06-12: libexif-0.6.16 security release fixes CVE-2006-4168 aka IDEF1514. Release notes

About the libexif project

- The libexif project maintains these five software packages:
  - **libexif**, the EXIF parsing library.
    release v0.6.24 build passing build passing coverage 82% coverity passed CodeQL passing oss-fuzz fuzzing
  - **exif**, the simple command line interface to libexif.
    release exif-0_6_22-release build passing build passing coverage 83% CodeQL passing coverity passed
  - **libexif-gtk**, the library of GTK+ based graphical user interface elements for libexif.
    release v0.5.0
  - **gexif**, the GTK+ based GUI interface to libexif-gtk.
  - **libexif-testsuite**, a harness for regression testing of libexif and exif.
- Github project page to browse source code
- SF.net project page to report bugs

Feedback on libexif

- Bug Tracker - submit your bug reports here (requires a free SourceForge account)
- libexif mailing list
- libexif IRC Channel - #libexif on irc.libera.chat
- gphoto IRC Channel - #gphoto on irc.libera.chat (channel of the related gphoto2 project, more populated)

About EXIF

- JEITA digital camera standards - the EXIF standard and more, from the keepers of EXIF
